Ethnobotany of the medicinal plants used by the ethnic communities of Kerman province, Southeast Iran

Seyed Hamzeh Hosseini^{1*}, Hossein Bibak¹, Abdollah Ramzani Ghara¹, Amirhossein Sahebkar^{2,3} and Abolfaz Shakeri⁴

Abstract

Background: Traditional medicine is a major component in the primary healthcare system in the southeast of Iran, which has a rich floral diversity. However, there is no comprehensive report on the use of medicinal herbs in this specific region. This traditional usage of medicinal plants by local communities could serve as a source for pharmacological and phytochemical studies. The main objective of this study was to identify ethnopharmacological knowledge on medicinal plant species and their local healing applications by the folk communities of Kerman province in the southeast of Iran.

Methods: In this cross-sectional study, data were collected from 217 herbal healers using semi-structured questionnaires, open interviews, and field surveys. Factors including use reports (UR) for each species, frequency of citation (FC), and informant consensus factor (ICF) were used to analyze the data. Plant species were identified by botanists through standard taxonomic methods.

Results: A total of 402 medicinal plants were used in healing practices by the local communities of Kerman province. These species belong to 273 genera of 73 families, among which 367 species are dicotyledons, 27 are monocotyledons, 7 species are cryptogam, and one species is gymnosperm. An important implication from the current study is the identification of the traditional medicinal use of 292 plant species in this region for the first time. Asteraceae, Apiaceae, Lamiaceae, and Fabaceae were the dominant medicinally utilized plant families, respectively. Leaf, flower, fruit, and seed were the most common plant parts used. Generally, crude drugs were used in the form of decoction, followed by poultice and infusion forms. Moreover, oral route is considered as the most common administration route followed by topical route. Endocrine (diabetes), dermatological, gastrointestinal, and respiratory problems were ranked as the most frequent ailment categories for which medicinal plants in this region were applied, respectively. Our findings suggested dominant use of Asteraceae and Apiaceae plants for the treatment of gastrointestinal disorders, Lamiaceae plants for respiratory and gastrointestinal ailments, and Apocynaceae plants for dermatological problems.

(Continued from previous page)

Conclusion: Our findings suggested that Asteraceae and Apiaceae plants were used for the treatment of gastrointestinal disorders, Lamiaceae plants for respiratory and gastrointestinal ailments, and Apocynaceae and Euphorbiaceae plants for dermatological problems. Among the medicinal plants with high UR and new ethnobotanical uses, *Rhazya stricta* was used for wound healing, *Calotropis procera*, *Clematis ispahanica* and *Euphorbia* spp. for eczema, *Cionura erecta* for the treatment of cough, *Launaea acanthodes* for the treatment of gastrointestinal parasites, *Berberis integrifolia* as an antidiabetic medicinal herb, *Dracocephalum polychaetum* and *Rydmania persica* for various types of chronic diseases, *Citrus limon* and *Citrus aurantium* for the treatment of ocular diseases and making the traditional kohl, *Calendula officinalis* for the treatment of ptomaine and *Prosopis farcta* for preventing nasal bleeding. The identified medicinal plants can be further evaluated for their pharmacological activity and underlying mechanisms of action.

Keywords: Ethnobotany, Medicinal plants, ICPC category, Kerman province, Iran

Introduction

According to the reports, medicinal use of plants dates back to at least 60,000 years. During this time, traditional systems of medicines have employed medicinal plants and their derivatives as valuable sources of new biologically active compounds and have been clinically practiced all over the world [1]. Until now, approximately 80% of the world's population still use traditional herbal medicines [2]. In fact, herbal medicines can serve as complementary or alternative therapies for different types of diseases because of their low cost, availability, and generally fewer side effects [3]. Several FDA-approved drugs including artemisinin (from *Artemisia annua*), quinine (from *Cinchona officinalis*), vinblastine, vincristine, vinorelbine (from *Vinca rosea*), and etoposide (from Mayapple) primarily originate from traditional herbal medicines [4]. It has been estimated that nearly 400,000 flowering plant species exist on earth, among which only 6% have been evaluated for their biological properties, and still more than 90% remains unexplored [5]. Therefore, ethnobotanical study of medicinal plants provides valuable information for the synthesis of new drugs.

Around 8000 plant species have been listed in Iran, of which 2300 species have medicinal properties among which 75% (1728) are endemic species in Iran [6, 7].

Kerman province with 23 cities and 171,993 square kilometers area has covered about 11% of the land area of Iran [8], located in the southeast of this country, and bordered by 5 provinces of Yazd, South Khorasan, Hormozgan, Fars, and Sistan and Baluchestan. It has a unique biodiversity due to its diverse natural resources and climatic conditions including desert and semi-desert in the north, and dry, mountainous and Mediterranean in the south. Kerman province is a vast plain with the lowest altitude in Lut desert (300 m) and the highest altitude in the mountaintop of Hezar (4419 m) [8]. Based on the traditional pharmacopoeia and medicinal plant reports in some parts of this province, medicinal herbs mostly belong to the families of Labiate, Rosaceae,

Papilionaceae, Compositae, and Umbelliferae, and the genera of *Salvia*, *Nepeta*, *Artemisia*, *Astragalus*, *Ferula*, *Plantago*, *Ephedra*, and *Amygdalus* [9, 10].

From the cultural point of view, Kerman province has around 89 tribal communities (including Baluch, Turkish, and Fars), most of them still being partially dependent on the medicinal plants. Therefore, this province is home to different cultures and beliefs resulting in rich traditional knowledge and traditional medicine practices. For example, the old city of Jiroft in the southeastern Kerman province dates to about 5000 years ago, which, according to the reports, is the beginning of human civilization [11]. In this respect, traditional medicine has played a key role in Iranian culture and civilization [12]. Therefore, this rich traditional knowledge is useful not only in the ancient medical systems but also in the present healthcare systems [10], especially for primary health care needs [13]. In fact, the dependence of the folk communities in Kerman on the medicinal herbs is not only due to the low availability to the health care system, but it is also rooted in the Iranian-rich culture of traditional medicine [14, 15]. For example, in the face of epidemiological diseases (e.g., cholera and colds), scientists of the Iranian traditional medicine (ITM) such as Avicenna, Rhazes, and Aghili Alavi Shirazi have suggested prescription of various herbal remedies. At present, the locals of Kerman, based on their ancient knowledge, utilize herbal medicines such as *Thymus fedtschenkoi*, *Zataria multiflora*, *Dracocephalum polychaetum*, and *Glycyrrhiza glabra* in the treatment of epidemics. Generally, Kerman province with a diverse climate and biodiversity is home to various cultures (from the prehistoric times to the present) and the center of agriculture in Iran [10, 16]. Accordingly, in some areas of this region, certain non-registered herbaceous species are used that can be obtained by the local people. There are many villages and nomadic districts that are largely dependent on the ethnomedicinal knowledge for primary health care, with many specific

traditional herbal medicine practices in this region that have not been recorded anywhere else. Hence, the current study aimed to carefully investigate and record the ethnobotanical knowledge of the whole districts and cultures, particularly subcultures that had the maximum dependence on the traditional health care system of the Kerman province.

Materials and methods

Study area

The present study was carried out in Kerman province in the southeast of Iran with 23 cities and 3,164,716 inhabitants. Regarding population, the most populated city is Kerman with the following other cities as progressively less populated: Jiroft, Sirjan, Rafsanjan, Kahnuj, Rudbar, Anbarabad, Qale Ganj, Manojan, Faryab, Zarand, Bam, Fahraj, Narmashir, Rigan, ShahrBabak, Baft, Rabor, Orzueyeh, Bardsir, Ravar, Anar, and Koohbanan. In the current study, in each city, skilled herbalists, nomadic districts, and key villages were selected for data sampling. Kerman province is located between the 55° min and 25° to 32° north latitude and 26 min and 53° to 29 min and 59° east of the Greenwich meridian, as the largest province in Iran with the total area of 183,285 km², and the elevation of 400 to 4501 m above the sea level. About 6.3 million hectares of deserts of Iran (equivalent to 20%) are located in Kerman province. The area of the forests of Kerman province is 1.3 million hectares and belongs to the two vegetation regions of Irano-Turanian and Khaleej-Omani.

Species of the Irano-Turanian forest of Kerman are comprised of *Pistacia atlantica*, *Pistacia khinjuk*, *Juniperus excels*, *Prunus scoparia*, *Crataegus azarolus*, *Celtis australis* in the mountainous area, and *Haloxylon* spp. and *Calligonum* spp. in the desert area. Also, the species of Khaleej-Omani include *Calotropis procera*, *Tamarix* spp., *Prosopis* spp., and *Ziziphus* spp. and the endemic rare species of *Tecomella undulata* with the local names Golpar and Anar sheytan (Fig. 1).

Plant identification

Based on the maps, access roads, natural features, vegetation, and subcultures in the study area, each city was classified into districts. Then, the number of the informants was determined. The plant specimens were collected during the field surveys from nomadic, rural, and urban areas of Kerman province from 2017 to 2019. The herbarium specimens were prepared following standard methods [17–19] and identified with the help of Herbarium of the University of Jiroft and Kerman Agricultural and Natural Resources Research and Education Center. Nomenclature was corrected using an online database (the international plant names index and the plant lists). The voucher herbarium specimens were deposited in the herbarium of the Department of Plant Biology, University of Jiroft, Jiroft, Iran. The voucher specimens were identified by one of the authors (H.B) and reaffirmed by taxonomic experts from the Department of Plant Biology at the herbarium of the University of Jiroft.

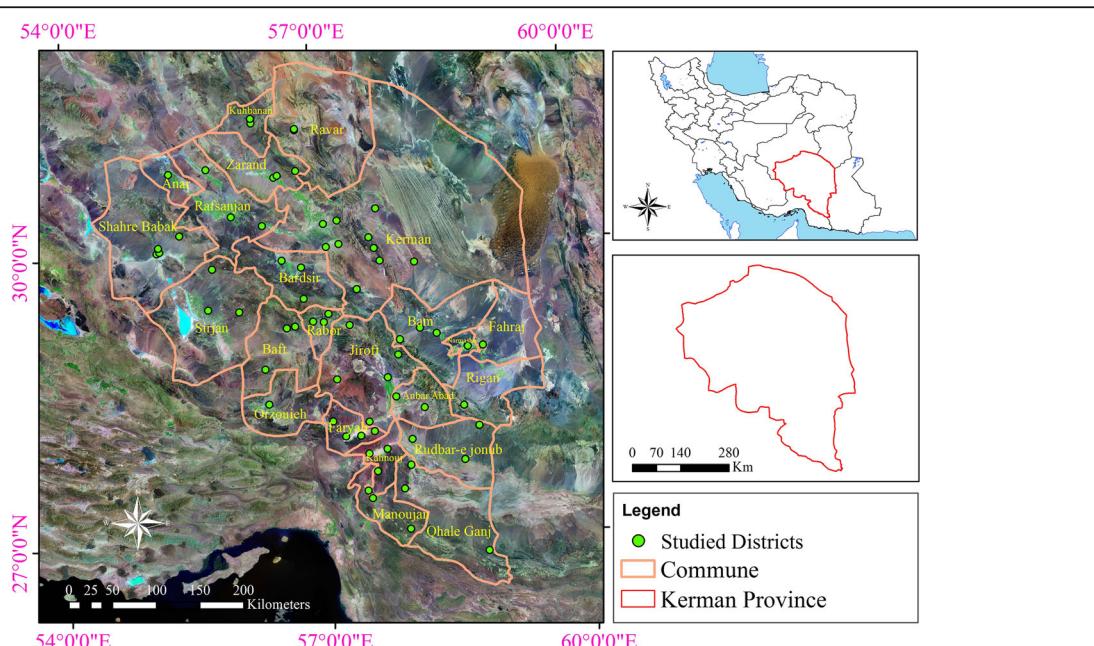

Fig. 1 Study area, Kerman province, southeast Iran

Ethnobotanical data collection

After classification of each city into districts, ethnobotanical surveys were carried out from October 2017 to the end of May 2019. The ethnobotanical data was collected using field surveys, open interviews, and semi-structured questionnaires. A total of 217 local informants (91 females and 126 males) aged between 30 and 79 years old were interviewed. Demographic properties including educational level, gender, age group, and occupation are recorded in Table 1. Also, geographical location and altitude (the lowest being 409 m in Manojan and the highest being 2800 m in Lalehzar) of each district are recorded in Table 2. Furthermore, information on local name, medicinal use, part(s) of the plant used, preparation, and administration methods is recorded (Table 3).

Ailment categories

All recorded ailments and medicinal plant uses were categorized based on the International Classification of Primary Care (ICPC-2) (<http://www.who.int/classifications/icd/adaptations/icpc2/en/>).

Some modifications were made for diseases such as low back pain, which were not matched with the broad classification of diseases. Therefore, low back pain, infections, and some nontherapeutic applications (pickle, flavoring of food, appetizing, vegetable, thirst, pest control, food coloring, herbal adhesive, and washing powder) were placed in the General and Unspecified category.

According to the results, 16 disease categories were set, namely: (1) General and Unspecified; (2) Gastrointestinal; (3) Ophthalmological; (4) Ear, Nose and Throat; (5) Cardiovascular; (6) Hematological and immune mechanism; (7) Musculoskeletal; (8) Neurological; (9) Psychological; (10) Respiratory; (11) Dermatological; (12) Endocrine/ Metabolic and Nutritional; (13) Urological; (14) Pregnancy, Childbearing, Family Planning; (15) Female Genitals; and (16) Cancer.

Table 1 Demographic profile of the local healers (n=217)

Characteristics		Abundance	Relative abundance
Gender	Male	126	57.60
	Female	91	42.60
Education	Primary level	103	47.47
	Secondary level	86	39.63
	Graduate	28	12.90
Age group	30-45	51	23.50
	46-60	132	60.83
	61-79	34	15.67
Occupation	Nomadic tribe	94	43.31
	Farmer	78	35.94
	Herbal healer	45	20.74

Data analysis

Data was analyzed using descriptive and quantitative statistical methods. In this regard, the ethnomedicinal data was analyzed using frequency, citation, and use reports. Use report was recorded whenever an informant cited a plant species or part(s) used for a particular ailment. Use reports were also quantified to define the highly used plant species for a particular ailment. Additionally, ICF was employed to determine the homogeneity of the information as follows:

$$ICF = \frac{Nur - Nt}{Nur - 1}$$

Nur is the number of use citations for each ailment category and Nt is the number of plant species used for the same ailment category by all the healers [20]. ICF ranged between 0 and 1. ICF value is higher (near to 1) when a few plant species are cited by a higher proportion of healers, indicating homogeneity of information about the usage of specific plants. A low value (close to 0) demonstrates the healers' disagreement about the usage of the plant for a particular ailment category [21].

In order to find out the importance of a specific plant species by informants, the index of relative frequency of citation (RFC) was calculated by dividing the frequency of citation (FC) by the total frequency of informants ($RFC = FC/N$). In this formula, FC is the number of informants who mentioned plant species as useful and N is the total frequency of informants in the survey [22].

Moreover, in order to determine cultural significance of each plant species, cultural importance index (CI) [22] was calculated as follows:

$$CI = \sum_{u=u_1}^{u_{nc}} \cdot \sum_{i=i_1}^{i_n} UR_{\frac{ui}{N}}$$

Independent samples *t*-test was run to compare medicinal uses between men and women. One-way ANOVA and post hoc was used to compare medicinal uses among age groups, educational levels, and occupations.

Results and discussion

Botanical diversity

In this ethnobotanical survey which covered the whole Kerman province (23 cities and 3,164,716 population), a total of 217 local informant interviews revealed the application of 402 medicinal plants for the treatment of 95 diseases across 16 ICPC ailments categories. These results showed that herbal medicines are mainly used to treat ailments among the local communities and indicated the rich floral diversity of this region.

These species belong to 273 genera of 73 families where 367 species are Dicotyledons, 27 species Monocotyledons, 7 species Cryptogam, and one species Gymnosperm. An important implication of the current study is the identification of the traditional medicinal

uses of 292 plant species in this region for the first time. Information about these recorded medicinal plants is summarized in Table 3 in terms of local names, voucher specimens, part(s) used, healing practices, drug preparation, ICPC classification, and use report (%).

Asteraceae, Apiaceae, and Lamiaceae with 43, 38, and 37 species were the dominant medicinally utilized plant families, respectively (Fig. 2). In the south of this province, Sadat-Hosseini et al. reported that Apiaceae, Asteraceae, and Lamiaceae are the dominant medicinal plant families [10]. Moreover, in several ethnobotanical studies in the neighboring provinces (in Sistan and Baluchesta [23], and in Isfahan [24]) and countries (like Turkey [25, 26], and Georgia [27]), similar results were reported on the dominance of two or three of these plant families. From the phytochemical point of view, the dominance of Apiaceae, Asteraceae, and Lamiaceae families might be due to phytochemical composition, which are clues to high content of essential oils and phenolic constituents responsible for antimicrobial and antioxidant properties [28, 29].

Nepeta, *Prunus*, *Ferula*, *Plantago*, *Ephedra*, *Euphorbia*, *Artemisia*, *Salvia*, *Artemisia*, and *Astragalus* were the dominant medicinally used plant genera. Moreover, the findings of Saber et al. revealed that *Salvia*, *Nepeta*, *Artemisia*, *Astragalus*, *Ferula*, *Plantago*, *Ephedra*, *Amygdalus*, and *Crataegus* are the most frequently and popularly

used medicinal plant genera in this district [8]. In general, the therapeutic significance of some plant families in a specific district may be related to the common distribution of their species [30].

There were some species like *Tecomella undulata* that were classified under vulnerable and endangered category of the IUCN list due to low reproduction and overexploitation [31, 32] while *Pergularia tomentosa* is a rare and endangered plant species which grows in the south of Kerman. Our previous research revealed that a low percentage of Kerman rangelands is vegetated with this plant and inhabitants uprooted it to meet their pharmacological needs [33].

The finding showed that the majority of the medicinal plant species (95%) belong to the wild habitat and the rest to cultivated areas. Other reports in this district [16, 27] confirm our results. In this case, informants of this region believed that wild plants are more medicinally effective than cultivated ones. Moreover, similar results were reported by Hu et al. in China [2].

With respect to healthcare policies, despite the relative adequate health services in this study area, local people and herbalists preferred herbal medicine due to the synthetic drugs side effects compared to herbal medicine. Furthermore, the general health policies that have been approved by the fifth development plan, as well as the national document on medicinal plants and traditional medicine, which emphasizes the organization and

Family	Scientific name	Local name (Persian); Voucher no.	Plant part used	Medicinal use (UR)	ICPC category	Preparation	Mode of application	(UR) A, B, C
Apiaceae	<i>Bunium persicum</i> (Boiss.) B.Fedtsch.	Ziresiah 227	Seed	Menstrual disorders (30), Flavoring of food (115), Digestive (2), Parasite repellent (3), Carminative (4), Antispasmodic (31),	GYN-X, OTH-A, GAS-D, GAS-D, GAS-D, NER-N	Decoction, Infusion, Mixed with food	Oral	185 A
Apiaceae	<i>Carum carvi</i> L.	Ziresiah 230	Fruit	Carminative (6), Relaxing (1)	GAS-D, NER-N	Infusion	Oral	7 A, C
Apiaceae	<i>Conium maculatum</i> L.	Showkaran 233	Whole plant	Cough (4), Respiratory ailments (6)	RES-R, RES-R	Decoction	Oral	10 A
Apiaceae	<i>Coriandrum sativum</i> L.	Geshniz 238	Leaf, Seed, Aerial parts	Reduce blood sugar (3), Intestinal infections (2), Blood fat (4), lactiferous (5), Flavoring of food (18) Carminative (3)	MET-T, GAS-D, Blood-B, PRE-W, OTH-A, GAS-D	Decoction, Dried vegetable	Oral	35 A
Apiaceae	<i>Cuminum cyminum</i> L.	Ziresabz 225	Seed	Menstrual disorders (10), Flavoring of food (14), Body tonic (5)	GYN-X-, OTH-A	Decoction, Infusion, Mixed with food	Oral	29 A
Apiaceae	<i>Daucus carota</i> L.	Havij 235	Bulb	Anemia (8), Sight enhancement (7), Appetizing (3)	Blood-B, EYE-F, OTH-A	Salad	oral	18 A, C
Apiaceae	<i>Dorema ammoniacum</i> D. Don	Oshtrk 258	Gum	Disinfectant (4), Edible (7), Infectious wound healing (11)	OTH-A, OTH-A, DER-S	Powder, Mask, Poultice, Vegetable	Oral	22 A
Apiaceae	<i>Dorema aucheri</i> Boiss.	Oshtrk 249	Gum	Disinfectant (4), Edible (7), Infectious wound (11)	OTH-A, OTH-A, DER-S	Powder, Mask, Poultice, Vegetable	Oral	22 A
Apiaceae	<i>Ducrosia anethifolia</i> (DC) Boiss.	Reshkak 291	Leaf, Seed	Abdominal pains (6), Body tonic (7), Child Carminative (9)	GAS-D, OTH-A, GAS-D	Infusion	Oral	22 A
Apiaceae	<i>Ducrosia assodii</i> Alava.	Reshkak 237	Leaf and fruit	Wound and burns healing (8)	DER-S	Oil	Topical	8 A
Apiaceae	<i>Eyngium billardieri</i> Delile	Chichagh 240	Aerial parts	Expectorant (4), Bronchitis (4), Antispasmodic (1), Carminative (2), Cough (4), Pain relief (3), Reduce rheumatic pain (1)	RES-R, RES-R, NER-N, GAS-D, RES-R, SKE-L	Decoction	Oral	19 B, C
Apiaceae	<i>Eyngium bungei</i> Boiss.	Shoochagh 242	Aerial parts	Pain relief (4)	NER-N	Decoction	Oral	4 B
Apiaceae	<i>Ferula assa-foetida</i> L.	Anghouze 245	Gum	Parasite intestine (16), Expectorant (2), Menstrual disorders (2), Gastritis (5)	GAS-D, RES-R, GYN-X, GAS-D	Fume, Infusion	Oral	25 A
Apiaceae	<i>Ferula gummosa</i> Boiss.	Anghouze 236	Gum	Cough (6), Laxative (3)	RES-R, GAS-D	Infusion	Oral	9 A
Apiaceae	<i>Ferula oopoda</i> (Boiss.) Boiss.	Anghouze 252	Latex, Fruit	Toothache (35), Carminative (18), Intestinal parasite (30), Tooth infection (10), Expectorant (4)	GAS-D, GAS-D, GAS-D, RES-R	Poultice, Decoction	Oral	97 A
Apiaceae	<i>Ferula ovina</i> (Boiss.) Boiss.	Anghouze shirin 247	Aerial parts	Carminative (15)	GAS-D	Decoction	Oral	15 A

Table 3 Medicinal plants used by ethnic communities in the Kerman province (Continued)

Family	Scientific name	Local name (Persian); Voucher no.	Plant part used	Medicinal use (UR)	ICPC category	Preparation	Mode of application	(UR) A, B, C
Apiaceae	<i>Ferula persica</i> Willd.	Anghouzeh 250	Latex, Fruit	Cough (6), Laxative (3)	RES-R, GAS-D	Decoction	Oral	9 A
Apiaceae	<i>Ferula szowitziana</i> DC.	Anghouze 254	Latex	Stomachache (6)	GAS-D	Cooked with meat and vegetables	Oral	6 A
Apiaceae	<i>Ferulago angulata</i> (Schleid.) Boiss.	Garchi 257	Aerial parts	Carminative (6), Flavoring of butter (1), Aromatherapy (1)	GAS-D, OTH-A	Decoction, Powder, Dressing	Oral	8 A
Apiaceae	<i>Foeniculum vulgare</i> Mill.	Badioun 244	Seed	Carminative (41), Gastric discomfort (27), Bone and joint pains (12), Asthma (1), Digestive (11)	GAS-D, GAS-D, SKEL-, RES-R, GAS-D	Decoction	Oral	92 A
Apiaceae	<i>Pulicaria undulata</i> (L.) C.A.Mey.	Soothe 259	Leaf	Dysentery (10), Wound healing (3)	GAS-D, DER-S	Decoction, Poultice	Oral, Topical	14 A, C
Apiaceae	<i>Heracleum persicum</i> Desf. ex Fisch., C.A.Mey. & Avé-Lall.	Golpar 258	Fruit, Flower	Relaxing (8)	NER-N	Aromatic water	Oral	8 B, C
Apiaceae	<i>Levisticum officinale</i> W.D.J.Koch	Karasm 262	Aerial part	Carminative (5), Gastric discomfort (10), Blood pressure (19)	GAS-D, GAS-D, CAR-K	Aromatic water	Oral	34 B, C
Apiaceae	<i>Levisticum persicum</i> Freyn & Bornm.	Karasm 260	Aerial parts, Stem	Pickle (3), Aromatherapy (1), Flavoring of food (2)	OTH-A, OTH-A	Decoction, Dressing, Powder	Oral	5 A
Apiaceae	<i>Petroselinum crispum</i> (Mill.) Fuss	Jafari 229	Young branches	Urinary stone (3), Digestive (12), Anemia (5)	URO-U, GAS-D, Blood-B	Decoction	Oral	20 A
Apiaceae	<i>Pimpinella saxifraga</i> L.	Jafari Kouhi 263	Leaf	Stomachache (21)	GAS-D	Decoction	Oral	21 A
Apiaceae	<i>Platycarne aucheri</i> (Boiss.) Boiss.	Zarbarak 255	Leaf	Asthma (7)	RES-R	Decoction	Oral	7 A, C
Apiaceae	<i>Prangos cheilanthifolia</i> Boiss.	Sekbinch 280	Young branches, Gum	Carminative (5)	GAS-D	Mixed with food	Oral	5 B, C
Apiaceae	<i>Prangos ferulacea</i> (L.) Lindl.	Garchi 253	Foliage	Flavoring of dairy (8), Parasite repellent (6), Toothache (7), Carminative (3), Acne (2), Infectious wound (5)	- GAS-D, GAS-D, GAS-D, DER-S, DER-S	Edible, Poultice	Oral, Topical	41 B, C
Apiaceae	<i>Prangos uloptera</i> DC.	Jashir 270	Young branches	Carminative (15), Body tonic (17)	GAS-D, OTH-A	Mixed with food	Oral	32 A, C
Apiaceae	<i>Psammogeron stockii</i> (Boiss.) Nasir	Izbook 273	Aerial parts	Febrifuge (4)	OTH-A	Decoction	Oral	4 B, C
Apiaceae	<i>Scandix sstellata</i> Banks & Sol.	Badyan koohi 275	Whole plant	Body tonic (25), Stomach tonic (13)	OTH-A, GAS-D	Decoction	Oral	38 B, C
Apiaceae	<i>Trachyspermum ammi</i> (L.) Sprague	Kaserk 277	Fruit	Stomachache (19), Carminative (7)	GAS-D, GAS-D	Decoction	Oral	26 A
Apiaceae	<i>Pycnocycla spinosa</i> Decne.	Sagdandan 279	Root	Scorpion bite (1)	OTH-A	Decoction	Oral	2 B, C
Apiaceae	<i>Pycnocycla baschgardiana</i> Mozaff.	Pvander 288	Flower	Stomachache (2)	GAS-D	Decoction	Oral	3 B, C
Apocynaceae	<i>Calotropis procera</i> (Aiton) Dryand.	Kark 849	Latex	Eczema (98), Scorpion bite (9), Earache (4), Toothache (6), Cancer (1)	DER-S, DER-S, Ear-H, GAS-D, CAN-C	Latex	Topical, Oral	151 B

Table 3 Medicinal plants used by ethnic communities in the Kerman province (Continued)

Family	Scientific name	Local name (Persian); Voucher no.	Plant part used	Medicinal use (UR)	ICPC category	Preparation	Mode of application	(UR) A, B, C
Apocynaceae	<i>Cionura erecta</i> (L.) Griseb.	Jaze sabz 852	Leaf	Reduce blood sugar (11), Bruise (10) Sore throat (3), Expectorant (77), Cough (87)	MET-T, SKE-L OTH-A, RES-R, RES-R GAS-D	Poultice Decoction, Latex	Topical Oral	167 B, C 4 A, C
Apocynaceae	<i>Nerium oleander</i> L.	Gish 861	Leaf	Stomachache (3), Skin diseases (1)				
Apocynaceae	<i>Pergularia tomentosa</i> L.	Keshtook 855	Latex	Eczema (2), Constipation (1), Parasite repellent (2), Cancer (1)	DER-S, GAS-D, CAN-C	Poultice, Decoction	Topical, Oral	15 B, C
Apocynaceae	<i>Periploca aphylla</i> Decne.	Shirbadam 853	Whole parts	Hair removal of animal skin (9)	OTH-A	Decoction	Topical	
Apocynaceae	<i>Rhazya stricta</i> Decne.	Eshbarg 859	Latex, Aerial parts	Burn healing (3), Skin inflammation (5)	DER-S, DER-S	Mask, Poultice	Topical	8 B, C
Apocynaceae	<i>Rhazya stricta</i> Decne.	Eshbarg 859	Leaf	Scorpion and snake bite (5), Sore throat (2), Febrifuge (41), Ear ache (1), Eye ache (1)	DER-S	Decoction	Bath	173 B
Arecaceae	<i>Phoenix dactylifera</i> L.	Magh 1123	Pollen	Wound healing (63), Joint pains (57), Reduce blood sugar (3)	DER-S, SKE-L, MET-T	Poultice	Topical	
Arecaceae	<i>Nannorrhops ritchieana</i> (Griff.) Aitch.	Daz 125	Pith parenchyma	Improvement of male fertility (11)	PRE-W	Mixed with honey	Oral	17 B, C
Asparagaceae	<i>Leopoldia comosa</i> (L.) Parl.	Simook 1235	Bulb	Anti-diarrhea (2), Bronchitis (3), Cough (1)	NER-N	Edible	Oral	
Asteraceae	<i>Achillea eriophara</i> DC.	Gole bengerask 921	Flowering branches	Relaxing (4), Gastric discomfort (7), Parasite repellent (3), Anti-diarrhea (10), Menstrual disorders (2), Cramps, Febri-fuge (8), Stomachache (12)	GAS-D, RES-R, RES-R	Mixed with food	Oral	
Asteraceae	<i>Achillea santolinoides</i> Lag.	Gole bengerask 918	Flowering branches	Relaxing (4), gastric discomfort (7), Parasite repellent (3), Anti-diarrhea (10), Menstrual disorders (2), Cramps, Febri-fuge (8), Stomachache (12)	NER-N, GAS-D, GAS-D, GAS-D, GYN-X, SKE-L, OTH-A, GAS-D	Infusion, Powder	Oral	46 A, C
Asteraceae	<i>Achillea wilhelmsii</i> C. Koch	Gole bengerask 922	Flowering branches	Stomach ache (12), Disinfectant (1), Blood purifier (2), Carminative (4), Diuretic (1), Antispasmodic (6)	GAS-D, OTH-A, Blood-B, GAS-D, URO-U, NEF-N	Decoction	Oral	26 A
Asteraceae	<i>Arctium lappa</i> L.	Babaaadam 950	Leaf	Vertigo (3), Blood purifier (2), Antispasmodic (4), Detoxification (1), Food digestion (7), Parasite repellent (1), Kidney diseases (2)	NER-N, OTH-A, NER-N, OTH-A, GAS-D, GAS-D, URO-U	Poultice, Decoction	Oral	20 B, C
Asteraceae	<i>Artemisia absinthium</i> L.	Afsantin 930	Leaf, Flower	Intestinal parasites (5)	GAS-D	Decoction	Oral	5 A
Asteraceae	<i>Artemisia aucheri</i> Boiss.	Jaz 934	Flowering branches	Relaxing (6), Abdominal pains (27), Respiratory diseases (3), Body tonic (6), Febrifuge (25)	NER-N, GAS-D, RES-R, OTH-A, OTH-A	Decoction	Oral	68 A, C
Asteraceae	<i>Artemisia persica</i> Boiss.	Dermene torki 931	Flowering branches	Beauty of skin and hair (1)	DER-S	Essential oil, Aromatic water	Topical	
Asteraceae	<i>Artemisia persica</i> Boiss.	Dermene torki 931	Flowering branches	Febrifuge (44), Gastric infection (62), Stomachache (73)	OTH-A, GAS-D	Decoction	Oral	179 A, C

Table 3 Medicinal plants used by ethnic communities in the Kerman province (Continued)

Family	Scientific name	Local name (Persian); Voucher no.	Plant part used	Medicinal use (UR)	ICPC category	Preparation	Mode of application	(UR) A, B, C
Asteraceae	<i>Artemisia scoparia</i> Waldst. & Kiram.	Dermeneh 932	Aerial parts	Stomachache (13)	GAS-D	Decoction	Oral	13 B, C
Asteraceae	<i>Artemisia sieberi</i> Besser	Sorkhdhermon 953	Flowering branches	Anti-nausea (20), Antispasmodic, (8) Parasite repellent (18)	GAS-D, NER-N, GAS-D	Decoction	Oral	61 A
Asteraceae	<i>Atractylis cancellata</i> L.	Khaarcharkha 940	Flowering branches	Bruise (15)	SKE-L	Decoction	Topical	
Asteraceae	<i>Calendula officinalis</i> L.	Gole bahari 942	Gum, Leaf	Vegetable (3)	OTH-A	Row, Powder	Oral	3 B, C
Asteraceae			Aerial parts	Carminative (2), Pancreatic cancer (1)	GAS-D, CAN-C	Infusion	Oral	8 B, C
Asteraceae			Aerial parts	Acne (3), Pterygium (2)	DER-S, EYE-F	Oil, Aromatic water	Topical, Eye drop	
Asteraceae	<i>Carthamus lanatus</i> L.	Kharzard 971	Flower	Bruise (2)	SKE-L	Poultice	Topical	2 B, C
Asteraceae	<i>Carthamus oxyacanthus</i> M.Bieb.	Golrangzard 972	Leaf and flower	Purgative (1), Menstrual disorders (1), Blood purifier (1)	GAS-D, GYN-X, OTH-A	Decoction	Oral	3 B, C
Asteraceae	<i>Centaurea benedicta</i> (L.) L.	Khar moghadas 980	Flowering branches	Memory tonic (2)	NER-N	Decoction	Oral	2 B, C
Asteraceae	<i>Centaurea bruguierana</i> (DC.) Hand.-Mazz.	Gole gandom 981	Aerial parts	Anti-inflammatory (2)	SKE-L	Decoction	Oral	2 A
Asteraceae	<i>Cichorium intybus</i> L.	Kashi 925	Leaf and Flower	Jaundice (15), Liver diseases (2), Diuretic (2), Febrifuge (13), Antihypertensive (2), Laxative (55)	GAS-D, GAS-D, URO-U, OTH-A, CAR-K, GAS-D	Aromatic water, Maceration	Oral	89 A, C
Asteraceae	<i>Cichorium pumilum</i> Jacq.	Kashi 913	Leaf and Flower	Jaundice (14), Liver diseases (2), Febrifuge (14), Blood purifier, Antihypertensive (2), Laxative (50)	GAS-D, GAS-D, OTH-A, OTH-A, GAS-D	Aromatic water, Maceration	Oral	96 A
Asteraceae	<i>Cirsium avense</i> (L.) Scop.	Kangar 925	Root	Appetizing (5)	OTH-A	Decoction	Oral	
Asteraceae	<i>Cota tinctoria</i> (L.) J.Gay	Babounesh 939	Pith parenchyma	Gastric discomfort (8), Appetizing (2), Disinfectant (4), Febrifuge (7)	GAS-D, OTH-A, OTH-A	Decoction	Oral	21 A
Asteraceae	<i>Cousinia congesta</i> Bunge.	Polcoosh 945	Flowering branches	Throat pains (4), Nervous problems (13), Common cold (14), Anti-diarrhea (20), Prostate (5)	GAS-D, NER-N, RES-R, GAS-D	Decoction	Oral	56 A, C
Asteraceae	<i>Cyanus depressus</i> (M.Bieb.) Soják	Gole gandom 977	Gum	Asthma (2)	RES-R	Decoction	Oral	
Asteraceae	<i>Echinops ritrodes</i> Bunge	Kaloor 983	Fruit	Gastric discomfort (7)	GAS-D	Decoction	Oral	2 B, C
Asteraceae	<i>Glebionis coronaria</i> (L.) Cass. ex Spach.	Davoodi 986	Aerial parts	Blood purifier (2), Eyesight enhancement (2)	OTH-A, EYE-F	Infusion	Oral	18 B, C
Asteraceae	<i>Gundelia tournefortii</i> L.	Kangar 974	Pith parenchyma	Gastric discomfort (8), Constipation (12), Reduce Blood fat (1)	GAS-D, GAS-D, OTH-A, OTH-A	Edible, Salad	Oral	36 B, C
Asteraceae	<i>Hertia angustifolia</i> (DC.) Kunze	Karkich biabani 975	Leaf, Flower	Blood purifier (15)	NER-N	Decoction	Oral	4 B, C
Asteraceae	<i>Hertia intermedia</i> (Boiss.) Kunze	Karkich 973	Flowering	Pain relief (4)	DER-S, GAS-D, GAS-D	Poultice, Topical,		8 A
Asteraceae				Insect bite (5), Purgative (2), Parasite repellent (1)				

Table 3 Medicinal plants used by ethnic communities in the Kerman province (Continued)

Family	Scientific name	Local name (Persian); Voucher no.	Plant part used	Medicinal use (UR)	ICPC category	Preparation	Mode of application	(UR) A, B, C
Asteraceae	<i>Inula britannica</i> L.	Mosafa 979	Aerial parts	Reducing thirst (3)	OTH-A	Decoction	Oral	3 B, C
Asteraceae	<i>Lactuca orientalis</i> (Boiss.) Boiss.	Jaro 958	Latex, Flower	Insomnia (3)	OTH-A	Syrup	Oral	3 B, C
Asteraceae	<i>Lactuca sericea</i> L.	Kahokhardar 916	Aerial parts, Latex	Bone and joint pains (1), Purgative (1)	SKE-L, GAS-D	Decoction	Oral	2 A
Asteraceae	<i>Launaea acanthodes</i> (Boiss.) Kunze	Goojar 918	Aerial parts	Animal parasite repellent (122), Pain relief (4)	GAS-D, NER-N	Poultice, Decoction	Oral	126 B, C
Asteraceae	<i>Matricaria chamomilla</i> L.	Babounak 946	Flowering branches	Anti-inflammation (2), Anti-nausea (3)	SKE-L, GAS-D	Decoction	Oral	5 B, C
Asteraceae	<i>Onopordum carmamicum</i> (Burm.) Burm.	Kangar 919	Young branches	Gastric discomfort (4)	GAS-D	Decoction	Oral	4 B, C
Asteraceae	<i>Onopordum leptolepis</i> DC.	Kangar 920	Aerial parts	Urinary stone (6), Abdominal pains (9), Anti-diarrhea (8)	URO-U, GAS-D, GAS-D	Decoction	Oral	23 B, C
Asteraceae	<i>Rhaponticum repens</i> (L.) Hidalgo	Talkhe sad! 927	Aerial parts	Baby fever (2), Cancer (2)	OTH-A, CAN-C	Poultice, Decoction	Topical	4 B, C
Asteraceae	<i>Scorzonera mucida</i> "Rechf.", Aellen & Esfand.	Kalaghoo 912	Fresh leaf	Infectious wound (3)	DER-S	Poultice	Topical	3 B, C
Asteraceae	<i>Senecio glaucus</i> L.	Bangdaneh 990	Aerial parts	Chronic wound (6)	DER-S	Poultice	Topical	6 B, C
Asteraceae	<i>Silybum marianum</i> (L.) Gaertn.	Khamaryam 995	Leaf	Fatty liver (35), Reduce blood sugar (3)	GAS-D, MET-T	Decoction	Oral	38 A, C
Asteraceae	<i>Sonchus asper</i> (L.) Hill	Shirtaghak 996	Leaf	Skin rash (3)	DER-S	Poultice	Topical	3 A
Asteraceae	<i>Sonchus oleraceus</i> (L.) L.	Shirtaghak 997	Leaf	Skin rash (3)	DER-S	Poultice	Topical	4 A
Asteraceae	<i>Tanacetum parthenium</i> (L.) Sch Bip.	Babouneh 960	Aerial parts	Parasite repellent (4), Migraine (2), Anti-inflammation (10), Peptic ulcer (3), Gastritis (6)	OTH-A, NER-N, SKE-L, GAS-D, GAS-D	Decoction	Oral	25 A
Asteraceae	<i>Taraxacum assermanii</i> Boiss.	Shirdandan 998	Leaf, Flower	Liver tonic (1), Diuretic (1)	GAS-D, URO-U	Decoction	Oral	2 B, C
Asteraceae	<i>Taraxacum pseudocallocephalum</i> Soest.	Gasedak 906	Seed	Blood fat (1)	Blood-B	Decoction	Oral	1 B, C
Asteraceae	<i>Tragopogon graminifolius</i> DC.	Sheng 999	Leaf, Root	Diuretic (3), Gastrointestinal disorders (2)	URO-U, GAS-D	Decoction	Oral	5 B, C
Asteraceae	<i>Berberis integrifolia</i> Bunge	Zarch 681	Root	Reduce blood sugar (61), Animal parasite repellent (2), Hepatitis (2), Joint pains (22), Breaking bone healing (15), Leaving addiction (27)	MET-T, GAS-D, CAR-K, GAS-D, SKE-L, SKE-L	Decoction	Oral	182 A
Berberidaceae			Leaf	Textile fiber color (9), Blood pressure (28)	OTH-A, CAR-K	Decoction	-	
Biebersteiniaceae	<i>Biebersteinia multifida</i> DC.	Piche bahman 683	Fruit	Blood purifier (30), Heat regulation (1), Hives (3), Laxative (4)	OTH-A, OTH-A, DER-S, GAS-D	Decoction	Oral	
Bignoniaceae	<i>Tecomella undulata</i> (Sm.) Seem.	Golparak 701	Stem bark, Leaf	Reinforcing sexual desire (9), Pain relief (5), Colic (3)	OTH-A, NER-N, GAS-D	Decoction	Oral	17 B, C
Bignoniaceae				Skin ailments (79), Eczema (64), Reduce blood sugar (41), Urinary problems (10)	DER-S, DER-S, MET-T	Poultice, Decoction	Topical	194 A

Malvaceae	<i>Althaea aucheri</i> Boiss.	Khami 584	Leaf	Laxative (30), Cough (3), Antihypertensive (7), Jaundice (15), Skin discomfort (8)	GAS-D RES-R, CAR-K, GAS-D, DER-S RES-R	Maceration	Oral	63 A
Malvaceae	<i>Grewia tenax</i> (Forsk.) Fiori.	Pootorak 570	Stem	Cough (2)	CAR-K	Decoction	Oral	2 B, C
Malvaceae	<i>Hibiscus sabdariffa</i> L.	Chay torsh 571	Leaf	Antihypertensive (10)	NER-N, SKE-L, OTH-A, GAS-D, DER-S	Decoction	Oral	10 A, C
Malvaceae	<i>Malva microcarpa</i> Pers.	Khami 574	Seed, Leaf	Pain relief (13), Anti-inflammatory (10), Disinfectant (3), Jaundice (19), Infectious wound (6)	Decoction, Maceration, Poultice	Oral	51 A	
Malvaceae	<i>Malva neglecta</i> Wallr.	Khami sefid 575	Seed, Leaf	Diuretic (5), Anti-inflammatory (3)	URO-U, SKE-L	Maceration	Oral	8 A, C
Malvaceae	<i>Malva sylvestris</i> L.	Khami 577	Seed, Leaf	Heatstroke (4), Febrifuge (4), Mouth and throat protuberance (5), Cough (6), Febrifuge (9)	OTH-A, OTH-A, GAS-D, RES-R, OTH-A	Maceration	Oral	19 A
Menispermaceae	<i>Cocculus pendulus</i> (J.R.Forst. & Gr.Forst) Diels	Pichakoo 1030	Leaf	Constipation (5), Memory improvement (3), Common cold (5), Sore throat (6)	GAS-D, NER-N, RES-R, OTH-A	Decoction	Oral	9 B, C
Moraceae	<i>Anjir</i> 1040	Fruit, Leaf		Stomach tonic (15)	GAS-D	Decoction	Oral	19 B, C
Moraceae	<i>Anjir-e dalmi</i> 1042	Leaf		Reduce blood sugar (2), Relaxing (2), Diuretic (1)	MET-T, NER-N, URO-U OTH-A	Edible	Oral	11 A
Moraceae	<i>Ficus carica</i> L.	Toot-e sefid 1043	Fruit	Febrifuge (3)	GAS-D	Edible	Oral	
Moraceae	<i>Morus alba</i> L.	Leaf	Stem bark	Constipation (3)	RES-R, OTH-A, URO-U	Syrup	Oral	17 A
Moraceae	<i>Morus nigra</i> L.	Shahtoot 1044	Fruit	Common cold (8), Sore throat (7), Urinary infection (2)	RES-R, RES-R, OTH-A	Decoction, Poultice	Oral, Topical	54 A
Myrtaceae	<i>Eucalyptus camaldulensis</i> Dehnh.	Kalitus 1700	Leaf	Common cold (28), Respiratory ailments (22), Disinfectant (3)	RES-R, NER-N, OTH-A	Decoction	Oral, Topical	22 A
Myrtaceae	<i>Myrtus communis</i> L.	Mordaneh 1050	Leaf, Seed	Common cold (14), Relaxing (3), Removing the armpit odor (5)	OTH-A, GAS-D	Burnt ash	Oral	8 B, C
Myrtaceae	<i>Syzygium cumini</i> (L.) Skeels	Jam1051	Ash of Leaf and seed	Blood purifier (4), Gastric discomfort (4)	OTH-A, SKE-L, MET-T, SKE-L	Poultice, Decoction	Oral	
Nitrariaceae	<i>Peganum harmala</i> L.	Esfand 1060	Fruit, Seed	Disinfectant (52), Reduce rheumatic pain (2), Reduce blood sugar (9), <i>bruise</i> (18)	OTH-A, NER-N	Infusion	Topical, Oral	81 A
Oleaceae	<i>Jasminum officinale</i> L.	Yas sefid 1065	Flower	Antivirus (2), Relaxing (6)	CAR-K, DER-S, SKE-L, OTH-A, URO-U	Decoction, Oil, Pickle	Oral, Topical	8 B, C
Oleaceae	<i>Olea europaea</i> L.	Zeytoon 1066	Leaf, Fruit	Antihypertensive (21), Bone and joint pains (5), Appetizing (2), Urinary (5), Hair tonic (3)	OTH-A	Decoction, Poultice	Oral, Topical	61 A
Oleaceae	<i>Syringa persica</i> L.	Yas 1069	Stem bark, Fruit	Relaxing (3)	NER-N	Oil, Poultice	Topical, Oral	3 B, C
Oleaceae	<i>Epilobium angustifolium</i> L.	Bid alafi 1070	Leaf and	Pesticide (4), Anti-inflammation of mucosa and mouth	OTH-A, OTH-A, DER-S, Decoction	Oral	34 A	

Table 3 Medicinal plants used by ethnic communities in the Kerman province (Continued)

Family	Scientific name	Local name (Persian); Voucher no.	Plant part used	Medicinal use (UR)	ICPC category	Preparation	Mode of application	(UR) A, B, C
Onagraceae	<i>Epilobium hirsutum</i> L.	Bid alafi korkee 1072	Leaf, Root	(6), Wound healing (9), Heart tonic (8), Febrifuge (7)	CAR-K, OTH-A NER-N	Infusion	Oral	5 B, C
Orobanchaceae	<i>Orobanche tamosa</i> L.	Poor 1080	Stem	Stomachache (19)	GAS-D	Edible, Decoction	Oral	19 B, C
Papaveraceae	<i>Fumaria indica</i> (Hausskn.) Pugsley.	Shaterreh 1090	Leaf and young branches	Anti-diarrhea (5), Anti-nausea (4), Stomachache (5)	GAS-D, GAS-D, GAS-D	Decoction	Oral	14 A
Papaveraceae	<i>Fumaria officinalis</i> L.	Shaterreh 1091	Foliage	Blood purifier (6)	OTH-A	Infusion	Oral	6 A, C
Papaveraceae	<i>Fumaria parviflora</i> Lam.	Shaterreh 1093	Leaf and young branches	Anti-diarrhea (3), Anti-nausea (4), Stomachache (4), Blood purifier (6), Diuretic (3), Cutaneous Itching (5)	GAS-D, GAS-D, GAS-D, OTH-A, URO-U, DER-S	Decoction	Oral	25 A
Papaveraceae	<i>Fumaria vaillantii</i> Loisel.	Shaterreh 1095	Leaf and young branches	Anti-diarrhea (3), Anti-nausea (4), Stomachache (4)	GAS-D, GAS-D, GAS-D	Decoction	Oral	11 B, C
Papaveraceae	<i>Hypeocoum pendulum</i> L.	Shaterreh 1096	Root, Leaf	Cough (3), Anti-diarrhea (2)	RES-R, GAS-D	Decoction	Oral	5 B, C
Papaveraceae	<i>Papaver dubium</i> L.	Taryakoo 1098	Bulb, Leaf	Eczema (3), Acne (4), Anti-inflammatory (5), Bronchitis (6), Cough (5), Pain relief (3)	DER-S, DER-S, SKE-L, RES-R, NER-N	Mixed with vinegar, decoction	Topical, Oral	32 B, C
Papaveraceae	<i>Roemeria hybrida</i> (L.) DC.	Shagayeg 1099	Flower	Pain relief (9)	NER-N	Decoction	Oral	9 B, C
Pedaliaceae	<i>Sesamum indicum</i> L.	Konjed 1140	Seed	Prevention of hair loss (24), Blood fat (5)	DER-S, Blood-B	Decoction, Oil	Oral, Topical	29 A
Plantaginaceae	<i>Plantago amplexicaulis</i> Cav.	Tangbar 491	Leaf, Seed	Wound healing (5), Allergy (3), Heartstroke (2), Infectious disease (3), Stomachache (2), Respiratory ailments (2)	DER-S, OTH-A, OTH-A, OTH-A, GAS-D, RES-R	Poultice, Decoction	Oral, Topical	17 B, C
Plantaginaceae	<i>Plantago ciliata</i> Desf.	Kowchak 493	Leaf, Seed	Antibacterial (4), Burns (9), Anti-inflammatory (2), Constipation (3)	OTH-A, DER-S, SKE-L, GAS-D	Poultice, Decoction, Syrup	Oral, Topical, Oral	13 A
Plantaginaceae	<i>Plantago gentianoides</i> Sm.	Tangbar 494	Leaf, Seed	Constipation (5), Anti-inflammatory (5), Cough (4)	GAS-D, SKE-L, RES-R	Decoction	Oral	14 B, C
Plantaginaceae	<i>Plantago indica</i> L.	Kowchak 495	Seed	Anti-inflammatory (2), Constipation (3)	SKE-L, GAS-D	Decoction, Poultice, Syrup	Oral, Topical, Oral	5 B, C
Plantaginaceae	<i>Plantago lanceolata</i> L.	Kowchak 490	Leaf, Root, Seed	Baby jaundice (22), Constipation (18), Blood coagulation (3), Asthma (4), Stomachache (6)	OTH-A, GAS-D, Blood-B, RES-R, GAS-D	Dressing, Decoction	Topical, Oral	40 A
Plantaginaceae	<i>Plantago major</i> L.	Barhang 492	Aerial parts	Dry cough (6), Itchy throat (8), Alzheimer (5), Cancer (2), Anti-inflammatory (3), Baby jaundice (21), Cough (2), Expectorant (4), Burn healing (4)	RES-R, RES-R, NER-N, CAN-C, SKE-L, OTH-A, RES-R, RES-R, DER-S	Dressing, Decoction	Topical, Oral	28 A
Plantaginaceae	<i>Plantago ovata</i> Forsk.	Tokhm sefid 499	Seed	Anti-inflammatory (2), Constipation (3)	SKE-L, GAS-D	Decoction, Poultice, Syrup	Topical, Oral	5 B, C
Plantaginaceae	<i>Veronica anagallis</i> L.	Sizab 489	Aerial parts	Stomach tonic (10), Diuretic (7)	GAS-D, URO-U	Decoction	Oral	17 B

Table 3 Medicinal plants used by ethnic communities in the Kerman province (Continued)

C. Indicate the medicinal plants which reported in this region for the first. A: indicate the ethno-medical uses of the medicinal plants which quoted in the Persian ethnobotany, B: was not quoted in the in the Persian ethnobotany.

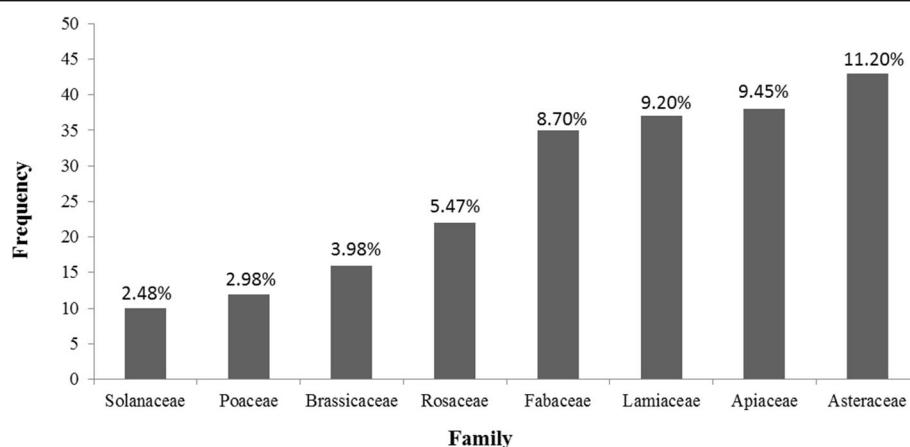

Fig. 2 Top dominants medicinally utilized plant families

development of natural and traditional products, could play an important role in shaping people's inclination towards traditional medicine [34]. Moreover, the medicinal plants' availability, low cost, positive experiences, and reliable Iranian references like Avicenna could be the other reasons to form positive attitudes. Kerman province is a pivotal state in the ancient Iran (Persia) and it is estimated that the human civilization emerged from Jiroft in the south of this province [11]. Therefore, with a rich history, it has developed a sound traditional health care system.

Plant parts used

To prepare crude drugs (Fig. 3) from 15 plant parts, the most common plant parts used were leaf, flower, fruit, and seeds with 26.03, 15.36, 13.85, and 12.73 percentages, respectively. According to many reports, the leaf is the most common medicinal plant part used in the ethnopharmacological applications [35, 36]. Field discussion

and other similar reports [30] indicated that availability, abundance, efficiency of use, and attention to the conservation points are the main reasons for the maximum usage of the leaves by local healers. In fact, local informants believed that different parts of the medicinal plants could have different therapeutic effects. In other words, plant organs have received varying degrees of attention based on traditional herbal medicine experiences of the ethnic communities. For instance, the root of *Berberis integerrima* is decocted and taken orally to treat diabetes while its leaf is used to treat hypertension. In addition, latex of *Calotropis procera* was used to cure eczema but its leaf is taken in the form of poultice to treat bruise and diabetes.

Preparation and application modes

The medicinal herbs were prepared in 14 forms including decoction, poultice, infusion, aromatic water, powder, vegetable, maceration, syrup, mask, fume, brush,

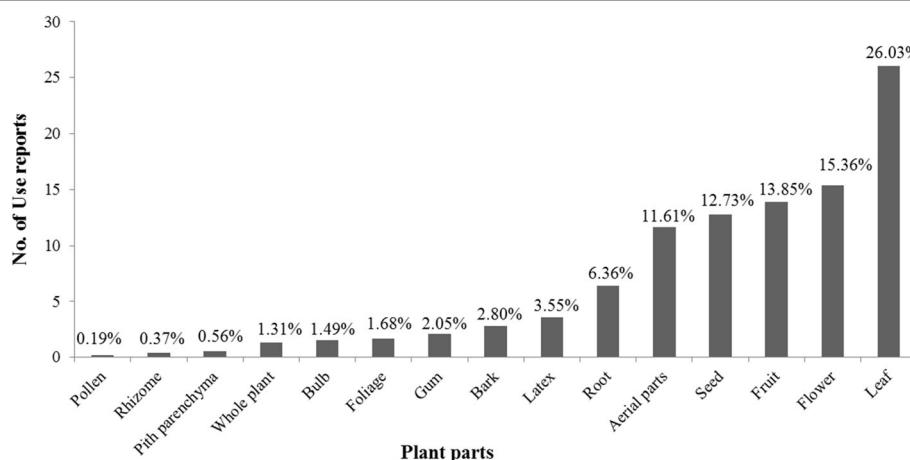

Fig. 3 Plant parts used in traditional herbal drug preparation and the number of use reports

and shampoo by local communities. The most common form of the crude drug was decoction (52.99%), followed by poultice (18.32%) and infusion (7.56%) (Fig. 4). The local informants of Kerman province believed that by decocting the medicinal plants parts, their extract becomes more concentrated and obtains better taste and stronger efficacy. Based on various reports [9, 16, 37–40], decoction is the most common method to prepare herbal medicine.

The medicinal drugs administrated in six categories included oral, topical, dressing, eye drop, inhale, and bath. Analyzing the ethnobotanical data showed that the most common administration route was oral, followed by topical (Fig. 5). Other ethnobotanical studies in Iran and other countries revealed that ethnic communities mostly prefer these two methods of preparation [5, 10, 41]. But some plant species such as *Lawsonia inermis*, *Juniperus excels*, *Rhazya stricta*, and *Pistacia atlantica* are utilized in both topical and oral administration routes. For example, bath with the aqueous extract of *Lawsonia inermis* leaves is known as an effective method for the treatment of jaundice. The poultice of this plant is used to cure skin disorders like eczema and wound scar while its root is decocted and used orally as a diuretic and for the treatment of bronchitis.

Informant consensus factors (ICF)

The ICF values for different ailment categories treated by the local informants in this survey ranged from 0.25 to 0.92 (Table 4). Endocrine (diabetes), dermatology, gastrointestinal, and respiratory with 0.92, 0.91, 0.90, and 0.89 ICF, respectively, were ranked as the most popular ailment categories for medicinal plants in this region.

Diabetes disorder scored the highest ICF (0.92). This unexpected result is due to the high use report of few medicinal plants for treating diabetes mellitus such as *Citrullus colocynthis*, *Berberis integrifolia*, and *Tecomella undulata* with 91, 61, and 41 use reports, respectively. In this case, *C. colocynthis*, a reputed medicinal plant in Kerman province, is well known due to its anti-diabetic properties [42]. Moreover, in this case, the locals extremely used the root of *Berberis integrifolia* and stem bark of *T. undulata* in treating diabetes mellitus. Field surveys and discussion with herbalists revealed that stress caused by poor economic conditions and job pressures can be one of the reasons for the high prevalence of diabetes in this region, but it needs more investigation.

Second ICF was found in dermatological ailment category with 1563 use reports. These findings are due to high use reports for plant species such as *Calotropis procera*, *Pergularia tomentosa*, *Rhazya stricta*, and *Tecomella undulata* in the treatment of eczema, wound healing, and other skin disorders. High ICF of dermatological disorders in this region might be due to high and long-term sunlight exposure, which caused skin disorders [10]. In addition, based on the field surveys, some environmental problems such as dust and wind associated with the particles of sands especially in the cities of Shahdad, Roodbar, Bam, Baravat, Qale Ganj, and Fahraj can be considered critical risk factors. Heidari et al. reported that the main reason for the skin diseases in the desert areas of the Kerman province like city of Bam is the dusty winds [43].

The third highest ICF (0.90) was found in gastrointestinal ailment category for 243 medicinal plant species. Species like *Artemisa* spp., *Glycyrrhiza glabra* and *Neptua cataria* were typical medicinal herbs for

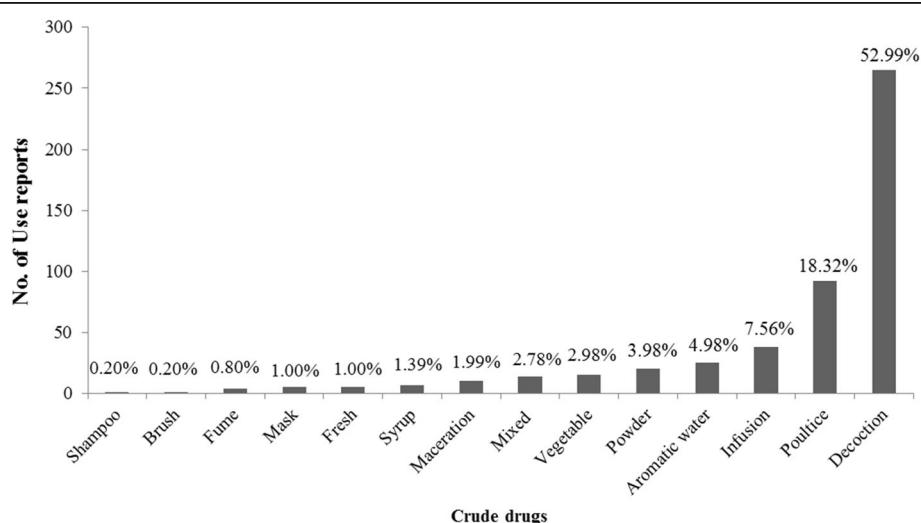

Fig. 4 Crude drug type and the number use reports

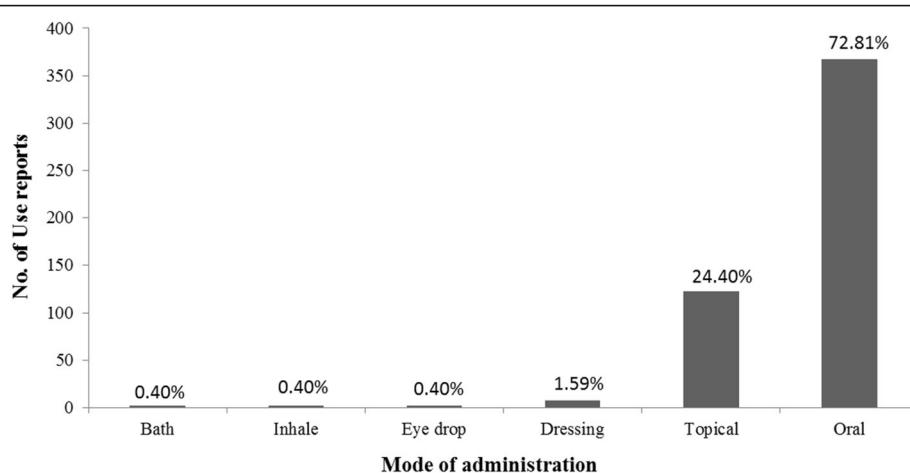

Fig. 5 Mode of herbal drug administration and the number of use reports

gastrointestinal disorders. Such findings indicated the rich and high level of informant consensus on the variety of medicinal herbs used to treat gastrointestinal ailments, and confirmed the prevalence of gastrointestinal ailments among people who lived in a specific region [30]. Moreover, ITM (e.g., Canon) has attracted considerable attention for the treatment of gastrointestinal disorders [44, 45]. Several studies in Iran and other countries reported that the species *Nepeta cataria* [46, 47], *Glycyrrhiza glabra* [48, 49], and *Artemisa* spp. [50, 51] were traditionally used to treat gastrointestinal diseases.

The 4th disease category with ICF value of 0.89 was respiratory disorders. *Zataria multiflora*, *Thymus fedtschenkoi*, and *Cionura erecta* were major plant species for cough with 104, 102, and 87 use reports, respectively. The large number of use reports for respiratory disorder category might be attributed to undesirable working conditions of local populations, like agriculture and husbandry in the dry and dusty regions without quick access to the health care systems. In confirmation of the present findings, Khanjani et al. studied the relationship between air pollution and respiratory diseases in Kerman from 2006 to 2010 and reported that sandstorms and the dust content increase of the atmosphere exacerbate respiratory diseases in this region [52].

Use report

Medicinal plants of the families Lamiaceae (such as *Nepeta cataria* and *Zataria multiflora*), Asteraceae (like *Artemisia persica* and *Launaea acanthodes*), and Apiaceae (such as *Bunium persicum*) had the largest number of use report in this area. Bibak and Moghbeli, and Sadat-Hosseini et al. studied the medicinal plants of the Jiroft and Kanuj in the south of Kerman and, similar to the findings of the current study, confirmed the

importance of traditional medication of these three families [10, 16]. In addition, plant species of the Apocynaceae family (like *Cionura erecta*, *Rhazya stricta*, and *Calotropis procera*) were ranked with a high use report. In this case, *Cionura erecta* is a well-known medicinal plant in the southern regions of Kerman for the treatment of sore throat and cough with no official records.

Cultural importance and relative frequency of citation index

The highest CI was found for *Nepeta cataria*, *Zataria multiflora*, *Teucrium polium*, *Rydingia persica*, and *Thymus fedtschenkoi*. The second highest CI was found for *Dracocephalum polychaetum* and *Pistacia atlantica*. These findings revealed that the first CI of the medicinal plants in Kerman province belonged to the Lamiaceae family. Additionally, *Pistacia atlantica* was ranked as an important medicinal plant with high CI index in this region. High CI values show that these medicinal plants are either highly utilized, or their uses are rising in traditional herbal medicine in a specific region [53].

However, for the RFC index, *Lawsonia inermis*, *Artemisia persica*, *Zataria multiflora*, and *Nepeta cataria* were classified as the first rank. In other words, the mentioned medicinal plants were referred by most of the informants. RFC value specifies the usefulness of medicinal plant species [5]. Table 5 shows the ranking based on each index (CI and RFC) for 20 dominant medicinal plant species with the highest CI and RFC indices.

Based on the independent samples *t*-test, women had more knowledge about the medicinal plants ($t = 1.87$, $p = 0.04$). Based on the field surveys, women in Kerman province are the preparers of the plant species for the medicinal applications, and it can be concluded that women had more practical experience in traditional

Nt= number of plant species used in each ailment category; NUR= number of mentions in each used category; ICF= Informant Consensus actor.

medicine in this region. The findings of Sadat-Hosseini et al. in the southern part of this region also confirmed our results [10].

The results of ANOVA showed that there were significant differences between the three age groups ($F = 3.17$, $p = 0.02$), and different levels of education ($F = 2.56$, $p = 0.03$). Also, based on Duncan's test, the two older age groups (older than 45 years old) with low level of education had more traditional knowledge about the medicinal plants. Based on these results and other reports like that of Hu et al., despite the importance of the traditional medicine for the older inhabitants, the younger generation does not show interest, which means that the ethnobotanical knowledge does not further flourish [2].

Finally, based on the results of ANOVA and Duncan's tests, occupation of the informants had a significant effect on their traditional medicinal knowledge ($F = 4.19$, $p = 0.01$), and genuine information belonged to the herbal healers, nomadic people, and villagers, respectively. Field surveys revealed that herbal healers, due to their job requirement, record and learn the relevant knowledge of the other ethnic groups like nomadic and villagers and usually have more comprehensive traditional knowledge.

Ethnopharmacological knowledge of tribes and different area

In the hot and dry regions of Kerman province like Kahnuj, Roodbar, Anbarabad, Qale Ganj, Manojan, Faryab,

Bam, Fahraj, Narmashir, Rigan, and plain part of Jiroft, most inhabitants are from Baluch tribe and the natives of Jiroft and Kahnooj. Based on the results, medicinal plants such as *Berberis integrifolia*, *R. persica*, *Calotropis procera*, and *R. stricta* are widely used to treat dermatological diseases. The rate of drug abuse in these regions is more than in mountainous areas because these cities are in the neighborhood of Afghanistan and the availability of drugs is thus higher. Hence, medicinal plants such as the plant from the genus *Achillea* (*A. wilhelmsii*, *A. eriophora*, *A. santolinoides*), *Berberis integrifolia*, and *R. persica* are used individually or in combination by the locals for stopping drug abuse.

Tribal communities and folk people, who live in the mountainous areas such as Hezar, Sirch, and Jebal barez, mainly use the herbal medicine for the treatment of gastrointestinal disorders. Based on the field surveys and discussion with the herbal healers, the main food of the nomadic people is milk and its derivatives especially curd and buttermilk, and they do not have a diverse diet. There is a significant relationship between the consumption of low-diversity diets and the risk of non-communicable diseases [54, 55].

New traditional medicinal uses

According to the in-depth comparison of the current ethnobotanical findings with previous national reports, a

large volume of unrecorded traditional medicine knowledge was gathered. A major implication of the current study is identification of traditional medicinal use of 292 plants in the Kerman province and 201 plants species in the Persian ethnobotany for the first time. This unrecorded knowledge is summarized based on the plant families as follows:

Amaranthaceae (*Amaranthus retroflexus* for the treatment of jaundice; *Anabasis aphylla* and *Seidlitzia rosmarinus* as traditional washing powders), Apiaceae (*Eryngium billardieri* and *Eryngium bungei* in pain relief, *Prangos ferulacea* as parasite repellents); Apocynaceae (*Cionura erecta* for sore throat and cough, *Rhazya stricta* for joint pains and body ache, *Calotropis procera* in the healing of skin disorders like eczema); Asteraceae (*Launaea acanthodes* as intestinal parasite repellents, *Artemisia* spp. for the treatment of gastric infection and stomachache, *Calendula officinalis* for the treatment of pterygium); Boraginaceae (*Cordia myxa* for common cold, sore throat and kidney stone); Ephedraceae (*Ephedra distachya* and *Ephedra foliata* for peptic ulcer and as materials in traditional tannery), Euphorbiaceae (*Euphorbia serpens* for eczema); Fabaceae (*Astracantha lateritia* for hair tonic and eczema, *Prosopis cineraria* for eczema and in traditional tannery, *Prosopis farcta* in preventing nose bleeding) Lamiaceae (*Dracocephalum polychaetum* as potent and multipurpose medicinal plant);

Plantaginaceae (*Plantago amplexicaulis*, *Plantago gentianoides* and *Plantago indica* for constipation and jaundice); Polygonaceae (*Pteropyrum aucheri* in healing of infectious wounds); Ranunculaceae (*Clematis isphahanica* in healing of eczema and psoriasis); Rosaceae (*Rosa moschata* as nerve tonic, *Prunus scoparia* in cancer prevention); Rubiaceae (*Plocama aucheri* in reducing rheumatic pain and blood sugar); Rutaceae (*Citrus limon* and *Citrus aurantium* for the treatment of eye diseases and making the traditional kohl); Salvadoraceae (*Salvadora oleoides* as parasite repellent). Tamaricaceae (*Tamarix aphylla* and *Tamarix kotschy* in healing of eczema and skin disease); Thymelaeaceae (*Daphne oleoides* in traditional dyeing); Violaceae (*Viola odorata* for chronic cough and as expectorant); and Zygophyllaceae (*Zygophyllum eurypterum* and *Zygophyllum fabago* as lactiferous and vermicide). These findings highlight the importance of the documentation of such valuable ethnobotanical information. Also, some of these medicinal plants can be targeted for pharmacological and bioactive studies with the aim of identifying phytochemical content and therapeutic applications.

Conclusion

Our extensive study in Kerman as the vastest province in Iran with 23 cities, 171,993 square kilometers area, and 89 tribal communities revealed rich traditional medicinal knowledge of its local populations. Traditionally, they used 402 medicinal plant species in 73 families to meet their pharmacological needs. Besides the common oral and topical utilization of the crude herbal drugs, dressing and bath with the medicinal plants are the exceptional mode of application in Kerman province. The highest ICF values belonged to diabetes, digestive, skin, and respiratory disorders, respectively.

Our findings suggested that Asteraceae and Apiaceae plants were dominantly used for the treatment of gastrointestinal disorders, Lamiaceae plants for respiratory and gastrointestinal ailments, and Apocynaceae plants for dermatological problems.

For several medicinal plants with high use reports such as *Cionura erecta*, *Tecomella undulata*, and *Launaea acanthodes*, scanty pharmacological and phytochemical data has been reported. On the other hand, the top list included *Rhazya stricta*: wound healing; *Calotropis procera*: eczema; *Berberis integrifolia*: diabetes and addiction cessation; *Dracocephalum polychaetum*: stomachache, diarrhea, detoxification and strengthening body; *Rydgingia persica*: leaving addiction; *Launaea acanthodes*: parasite repellent; *Cionura erecta*: expectorant; and *Tecomella undulata*: skin ailments, eczema, and diabetes. These results highlight the need for further bioactive and phytochemical studies on the mentioned medicinal plants. Finally, some frequently used medicinal

plants like *Cionura erecta*, *Dracocephalum polychaetum*, and *Tecomella undulata* are endangered and restricted in small parts of their habitats. Therefore, urgent conservation measures are needed.

ITM: Iranian traditional medicine

Acknowledgements

We sincerely thank the ethnic communities and local herbal healers of Kerman province for their helps in data sampling and continuing support of this study. We would like to acknowledge the University of Jiroft for financial support.

Authors' contributions

SHH and HB designed the work. AS, ARQ, and ASh participated in the organization of the ethnobotanical and ethnopharmacological data. HB conducted the botanical analysis. SHH participated in all steps (designing, field work, data analysis, literature search, etc.). The authors read and approved the final manuscript.

Authors' information

The authors have doctoral qualification in Medicinal plants, Plant systematic, Biology, Pharmacognosy, and Pharmaceutical Biotechnology. This work is based on the research project of SH, which is granted by the University of Jiroft.

Funding

This study was supported by research grants (No: 3818-97-6) from the University of Jiroft. We thank the University of Jiroft for technical and financial support.

Availability of data and materials

All data generated or analyzed during this survey are included in this article.

Ethics approval and consent to participate

This study was reviewed and approved by the Research Deputy at the University of Jiroft. The organization of the institute does not involve an Ethics Committee; therefore, there is no specific ethics code assigned to this study. However, each research proposal, like the one corresponding to the current study, is comprehensively reviewed by the university until an approval code is granted (No: 3818-97-6). We would like to clarify that this study did not involve any intervention and all questions from local informants were performed with prior verbal consent.

Consent for publication

Not applicable.

Competing interests

All the authors declare no conflict of interest.
